<b>Learning model</b>	<b>Case Studies</b>																																																																																																																																					
<b>Program Learning Outcomes (PLO)</b>	<b>PLO study program that is charged to the course</b>																																																																																																																																					
	<b>PLO-9</b>	Able to design, implement and evaluate science learning by utilizing ICT																																																																																																																																				
	<b>PLO-10</b>	Able to design and carry out experiments/investigations in integrated science learning to explain science cases and issues and solve problems, and interpret data																																																																																																																																				
	<b>Program Objectives (PO)</b>																																																																																																																																					
	<b>PO - 1</b>	Use ICT to find information or examples to study singular-plurals, word order and determiners																																																																																																																																				
	<b>PO - 2</b>	Mastering how to study the application of modals in sentences, tenses and passive voices with example sentences in the context of Science Education																																																																																																																																				
	<b>PO - 3</b>	Analyze subject-verb agreement, gerunds & infinitives on sentences related to the science concept																																																																																																																																				
	<b>PO - 4</b>	Be able to identify adjective clauses and noun clauses																																																																																																																																				
	<b>PO - 5</b>	Able to practice reading skills on reading text, vocabulary, writing and listening practice																																																																																																																																				
	<b>PLO-PO Matrix</b>

<b>Short Course Description</b>	This course provides students with basic and intermediate level English skills in reading, writing and listening which supports the competency of prospective science teachers. The scope discussed includes singular-plural in the example of reading texts, word order, determiner, modals, tenses, passive voice, subject-verb agreement, gerunds & infinitives, adjective clauses & adjectives, reading, vocabulary, writing, listening in the form of theory and presentation. Lectures are carried out using learning strategies with direction, text analysis, discussion, assignments (practicing) individually and in groups, and reflection.

#### Notes

- Learning Outcomes of Study Program Graduates (PLO - Study Program)** are the abilities possessed by each Study Program graduate which are the internalization of attitudes, mastery of knowledge and skills according to the level of their study program obtained through the learning process.
- The PLO imposed on courses** are several learning outcomes of study program graduates (CPL-Study Program) which are used for the formation/development of a course consisting of aspects of attitude, general skills, special skills and knowledge.
- Program Objectives (PO)** are abilities that are specifically described from the PLO assigned to a course, and are specific to the study material or learning materials for that course.
- Subject Sub-PO (Sub-PO)** is a capability that is specifically described from the PO that can be measured or observed and is the final ability that is planned at each learning stage, and is specific to the learning material of the course.
- Indicators for assessing** abilities in the process and student learning outcomes are specific and measurable statements that identify the abilities or performance of student learning outcomes accompanied by evidence.
- Assessment Criteria** are benchmarks used as a measure or measure of learning achievement in assessments based on predetermined indicators. Assessment criteria are guidelines for assessors so that assessments are consistent and unbiased. Criteria can be quantitative or qualitative.

7. **Forms of assessment:** test and non-test.
8. **Forms of learning:** Lecture, Response, Tutorial, Seminar or equivalent, Practicum, Studio Practice, Workshop Practice, Field Practice, Research, Community Service and/or other equivalent forms of learning.
9. **Learning Methods:** Small Group Discussion, Role-Play & Simulation, Discovery Learning, Self-Directed Learning, Cooperative Learning, Collaborative Learning, Contextual Learning, Project Based Learning, and other equivalent methods.
10. **Learning materials** are details or descriptions of study materials which can be presented in the form of several main points and sub-topics.
11. **The assessment weight** is the percentage of assessment of each sub-PO achievement whose size is proportional to the level of difficulty of achieving that sub-PO, and the total is 100%.
12. TM=Face to face, PT=Structured assignments, BM=Independent study.
