Learning model	Project Based Learning																																																																																																																																																						
Program Learning Outcomes (PLO)	PLO study program which is charged to the course																																																																																																																																																						
	PLO-5	Able to apply logical, critical, systematic, and innovative thinking in the context of developing or implementing science and technology.																																																																																																																																																					
	PLO-8	Mastering the concepts and implementation in developing software engineering, games, intelligent multimedia, and network computer engineering.																																																																																																																																																					
	PLO-11	Have adaptive character, entrepreneurial spirit and ability to work in teams.																																																																																																																																																					
	PLO-12	Able to implement science, technology, engineering, and mathematics (STEM) and informatics knowledge into research in education.																																																																																																																																																					
	Program Objectives (PO)																																																																																																																																																						
	PO - 1	Able to describe, explain, create, use objects and classes in object-oriented programming																																																																																																																																																					
	PO - 2	Able to design programs with Object-Oriented Thinking																																																																																																																																																					
	PO - 3	Able to define general classes and derived classes																																																																																																																																																					
	PO - 4	Able to design and use abstract classes and interfaces																																																																																																																																																					
	PO - 5	Able to use exceptions to handle errors in programs																																																																																																																																																					
	PO - 6	Able to create programs using AWT and Swing in Java																																																																																																																																																					
	PLO-PO Matrix

Short Course Description	This course teaches object-oriented programming concepts and techniques. In teaching the PBO concept, the Java programming language will be used because Java uses the concepts of objects and classes in making programs. Teaching materials include an introduction to OOP concepts, Java Virtual Machine (JVM), objects, classes, methods, constructors, I/O, inheritance, encapsulation, polymorphism, overloading, UML, files, AWT, Swing, applets and exceptions.

Evaluation Percentage Recap: Project Based Learning

No	Evaluation	Percentage
1.	Participatory Activities	29.16%
2.	Project Results Assessment / Product Assessment	24.66%
3.	Practical Assessment	26.16%
4.	Test	20%
		99.98%

Notes

1. **Learning Outcomes of Study Program Graduates (PLO - Study Program)** are the abilities possessed by each Study Program graduate which are the internalization of attitudes, mastery of knowledge and skills according to the level of their study program obtained through the learning process.
2. **The PLO imposed on courses** are several learning outcomes of study program graduates (CPL-Study Program) which are used for the formation/development of a course consisting of aspects of attitude, general skills, special skills and knowledge.
3. **Program Objectives (PO)** are abilities that are specifically described from the PLO assigned to a course, and are specific to the study material or learning materials for that course.
4. **Subject Sub-PO (Sub-PO)** is a capability that is specifically described from the PO that can be measured or observed and is the final ability that is planned at each learning stage, and is specific to the learning material of the course.
5. **Indicators for assessing** abilities in the process and student learning outcomes are specific and measurable statements that identify the abilities or performance of student learning outcomes accompanied by evidence.
6. **Assessment Criteria** are benchmarks used as a measure or measure of learning achievement in assessments based on predetermined indicators. Assessment criteria are guidelines for assessors so that assessments are consistent and unbiased. Criteria can be quantitative or qualitative.
7. **Forms of assessment:** test and non-test.
8. **Forms of learning:** Lecture, Response, Tutorial, Seminar or equivalent, Practicum, Studio Practice, Workshop Practice, Field Practice, Research, Community Service and/or other equivalent forms of learning.
9. **Learning Methods:** Small Group Discussion, Role-Play & Simulation, Discovery Learning, Self-Directed Learning, Cooperative Learning, Collaborative Learning, Contextual Learning, Project Based Learning, and other equivalent methods.
10. **Learning materials** are details or descriptions of study materials which can be presented in the form of several main points and sub-topics.
11. **The assessment weight** is the percentage of assessment of each sub-PO achievement whose size is proportional to the level of difficulty of achieving that sub-PO, and the total is 100%.
12. TM=Face to face, PT=Structured assignments, BM=Independent study.
