Description Electronic data processi generations, Future con software, input tools, prr communication systems, Introduction to the com business, industry, banki				sing, mpute roces , bas pone ting, e	the role of information technology in helping human work effectively and efficiently. Computer definition, ing, Data processing cycle, Computer systems, Computer capabilities. Hardware developments, computer nputers. Development of software, development of application software, development of operating system occessing tools, output tools, external storage, number and code systems. Introduction to data and network , basic software concepts. Introduction to Information Systems, introduction to databases and online systems. ponents of existing computer systems and information systems. Application of computers in the fields of ing, education, medicine, aviation, crime. Introduction of various existing e-businesses in accordance with the ion systems.

			r			
2	Understand computing concepts in Information Technology	 Identify the five components of a computer system. Explain the four categories of hardware and their functions. Discuss the relationship between hardware and software. Distinguish between operating systems and application programs Explain the difference between single and multi-user systems. 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
3	Describe the types and functions of the main components/hardware in a computer system, namely: Processor, Memory and Storage	 Explain the components and purpose of the central processing unit (CPU). Distinguish between primary storage (also called memory) and secondary storage (also called storage), and between RAM and ROM. Distinguish between two main types of magnetic storage, and identify three types of magnetic disk storage. Understand the types of Optical storage media 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
4	Describe the types and functions of components/Input Hardware and Output Devices	 Identify the input devices used and explain how they work in a computer system. Identify types of output devices and identify their uses in business. 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
5	Master the concept of the functions of Systems and Application Software	 Understand the concept of Systems and Application Software Understand the types of application software 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%

6	Understand the concepts and functions of Telecommunications and Networks in Information Technology	 Explain communication and networking in information technology. Describe forms of communication in information technology. 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation		0%
		3.Understand the role of communication and computer networks in information technology.		2 X 50		
7	Understand the concepts and functions of Telecommunications and Networks in Information Technology	 Explain communication and networking in information technology. Describe forms of communication in information technology Understand the role of communication and computer networks in information technology. 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
8	UTS (USS)			2 X 50		0%
9	Understand the concept of databases in information technology and be able to identify the application of databases in information technology.	 Understand basic database concepts. Identify when a business should use spreadsheets and when it should use databases. Identify the reasons organizations choose to share databases and the functions of database management systems. Discuss database database 	Criteria: 1. Observation Value Score 1 - 100 2. Character/Attitude Score Score 1 - 100 3. Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
10	Understand the concept of the internet and Word Wide Web (WWW) and be able to identify the function of the internet and www in information technology	 Understand how individual computers and server computers interact on the Internet. Explain the concept and capabilities of the internet. Identify communication skills and information retrieval from the Internet (information retrieval). 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%

11	Understand electronic trading in terms of concepts and developments	 Explain the meaning of electronic commerce. Identify the advantages of electronic trading compared to traditional trading Identify the characteristics of electronic procurement. Explain the purpose of electronic exchange and identify three forms that have emerged 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
12	Understand programming concepts and functions, programming languages and programming paradigms in information technology	 Explain programming concepts Distinguish between programming and programming languages Describe the types of programming paradigms 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
13	Able to understand and comprehend the Ethics of the Legal Framework in the Field of Information Technology (ethics of the use of information technology, crime on the internet, legal framework in the field of information technology, cyber law perspectives in law in Indonesia)	 can and knows the ethics of using technology know and understand crime on the internet Understand and comprehend the legal framework in the IT sector understand and understand the perspective of cyber law in law in Indonesia 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
14	Able to understand and comprehend the Ethics of the Legal Framework in the Field of Information Technology (ethics of the use of information technology, crime on the internet, legal framework in the field of information technology, cyber law perspectives in law in Indonesia)	 1.can and knows the ethics of using technology 2.know and understand crime on the internet 3.Understand and comprehend the legal framework in the IT sector 4.understand and understand the perspective of cyber law in law in law in 	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%

15	Know strategic issues and developments in information technology topics for the field of Informatics	Summarizes material, articles, whitepapers or papers about the latest developments in information technology in the field of Informatics	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%
16	Know strategic issues and developments in information technology topics for the field of Informatics	Summarizes material, articles, whitepapers or papers about the latest developments in information technology in the field of Informatics	Criteria: 1.Observation Value Score 1 - 100 2.Character/Attitude Score Score 1 - 100 3.Performance Value Score 1 - 100	Approach: Scientific Model: Problem Based Learning and Cooperative Learning Method: Discussion, Presentation 2 X 50		0%

Evaluation Percentage Recap: Case Study

No Evaluation Percentage

Notes

- Learning Outcomes of Study Program Graduates (PLO Study Program) are the abilities possessed by each Study
 Program graduate which are the internalization of attitudes, mastery of knowledge and skills according to the level of their study
 program obtained through the learning process.
- 2. The PLO imposed on courses are several learning outcomes of study program graduates (CPL-Study Program) which are used for the formation/development of a course consisting of aspects of attitude, general skills, special skills and knowledge.
- 3. **Program Objectives (PO)** are abilities that are specifically described from the PLO assigned to a course, and are specific to the study material or learning materials for that course.
- 4. **Subject Sub-PO (Sub-PO)** is a capability that is specifically described from the PO that can be measured or observed and is the final ability that is planned at each learning stage, and is specific to the learning material of the course.
- 5. Indicators for assessing ability in the process and student learning outcomes are specific and measurable statements that identify the ability or performance of student learning outcomes accompanied by evidence.
- Assessment Criteria are benchmarks used as a measure or measure of learning achievement in assessments based on predetermined indicators. Assessment criteria are guidelines for assessors so that assessments are consistent and unbiased. Criteria can be quantitative or qualitative.
- 7. Forms of assessment: test and non-test.
- 8. Forms of learning: Lecture, Response, Tutorial, Seminar or equivalent, Practicum, Studio Practice, Workshop Practice, Field Practice, Research, Community Service and/or other equivalent forms of learning.
- 9. Learning Methods: Small Group Discussion, Role-Play & Simulation, Discovery Learning, Self-Directed Learning, Cooperative Learning, Collaborative Learning, Contextual Learning, Project Based Learning, and other equivalent methods.
- 10. Learning materials are details or descriptions of study materials which can be presented in the form of several main points and sub-topics.
- 11. The assessment weight is the percentage of assessment of each sub-PO achievement whose size is proportional to the level of difficulty of achieving that sub-PO, and the total is 100%.
- 12. TM=Face to face, PT=Structured assignments, BM=Independent study.
